

Improving fire safety solutions

## Who is pinfa

pinfa, the Phosphorus, Inorganic and Nitrogen Flame Retardants Association represents the manufacturers and users of the three major technologies of non-halogenated flame retardants.

The members of pinfa share the common vision of continuously improving the environmental and health profile of their flame retardant products and offering innovative solutions for sustainable fire safety.

Part of the mission of pinfa is to provide information on non-halogenated phosphorus, inorganic and nitrogen flame retardants as a category. We seek to ensure that people are informed about all types of flame retardants available and understand what role they can play in fire safety, as well as the protection of people's health and the environment. We hope that as a result, supply chain professionals and policymakers alike can take decisions on the basis of fuller knowledge.

Therefore, pinfa engages in dialogue with the users of flame retardants on the development of environmentally-friendly fire safety solutions. pinfa also co-operates with governmental and non-governmental organisations in order to promote the development of scientific knowledge related to the whole life cycle of non-halogenated flame retardant technologies.

pinfa was established as a Sector Group within Cefic, the European Chemical Industry Council. It counts 17 non-halogenated flame retardants manufacturers as its members, and welcomes further membership. pinfa also agreed mutual membership with INEMI (the International Electronics Manufacturing Initiative).
